

AHA Annual Survey Database™

The Most Credible and Consistent Data about the Nation's Hospitals

With American Hospital Association's rich and growing set of data, we're empowering hospitals, health systems and their business partners to discover new directions, set strategies and plan actions for success in today's evolving health care landscape.

Data provided by
more than 6,200 hospitals
and **400 health care systems**

Featuring **over**
1,000 hospital data points
directly from the source

With AHA Annual Survey Database, you can identify:

- Utilization: admissions, births, surgeries, ED visits, and staffing
- Physician arrangements
- Hospital service lines and facilities
- Organizational structure and affiliations
- Alternative payment models
- Telehealth
- Remote Patient Monitoring
- Behavioral or social determinants of health services

Data from a source you can trust:

- The only database produced by the American Hospital Association in partnership with health care agencies, and other industry organizations
- State and local associations, Medicare and Medicaid centers, national organizations, and governmental bodies help identify hospitals

New data available this year:

- Use of artificial intelligence or machine learning in staffing and workflow optimization
- Workforce strategic planning
- Health equity strategies and implementation
- Population and/or community health partnerships
